GRADUATION CAPSTONE PROJECT • PRESENTED TO SPRINTS

StreetBite V1.0

Flutter Food Discovery & Ordering Application with Clean Architecture

Developed & Presented by: Mariam Qamar

Sprints Flutter Development Track • October 2026

Project Development Roadmap & Steps

A systematic 4-phase approach from architecture planning to production release and beta distribution.

01

Clean Architecture & DI

Establishing Data, Domain, and Presentation layers using GetIt and BLoC state management.

02

API & Firebase Services

Integrating live TheMealDB API via Dio, local caching, and secure Firebase Authentication.

03

UI & Localization

Building responsive screens with MediaQuery, dynamic English/Arabic ARB localizations, and themes.

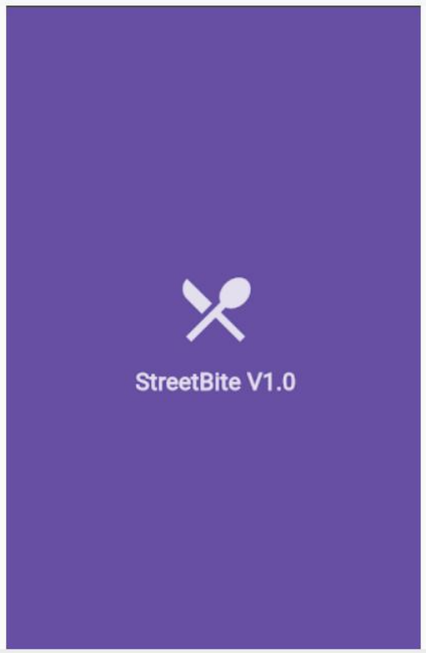

04

QA & Beta Release

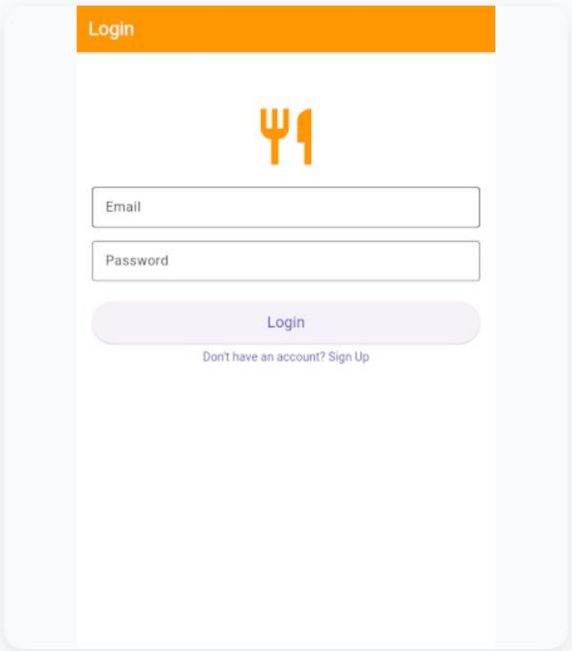

Executing manual QA tests, Appium Java automation, and publishing release APK to Firebase.

Feature Showcase: Onboarding & Authentication

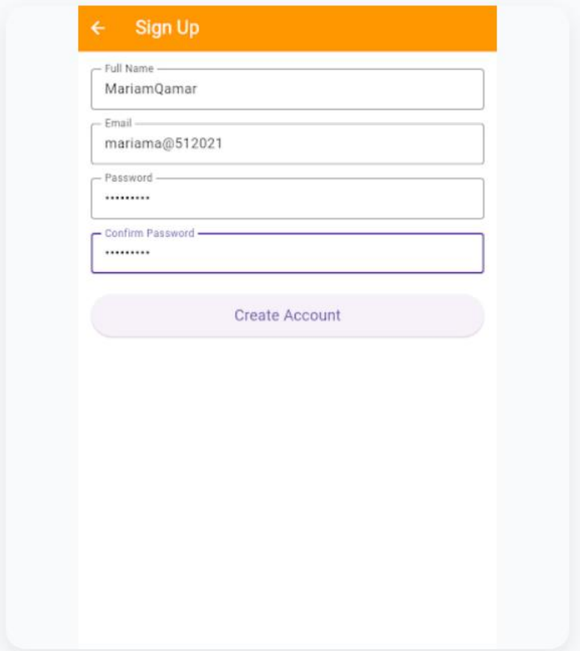

Seamless entry with animated splash transition, rigorous sign-up validation, and secure Firebase login.

Splash Screen: Fade-in brand animation.

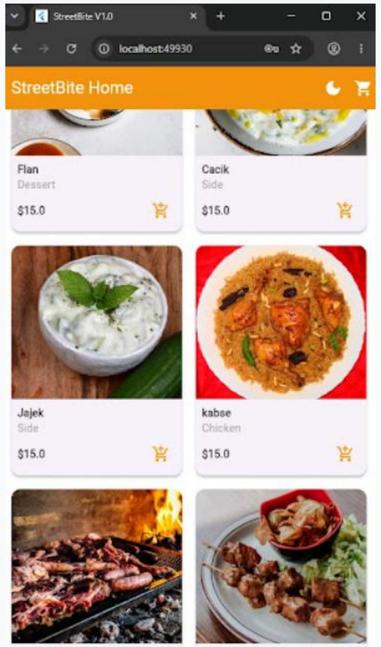

Login Screen: Email/password Firebase auth.

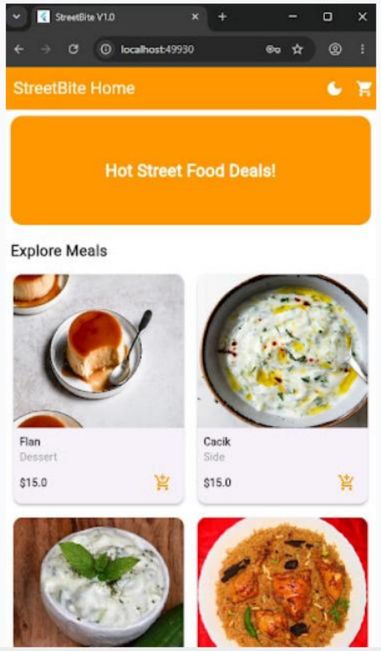

Sign Up: Field validation & new account setup.

Feature Showcase: Home Menu & Dark Mode

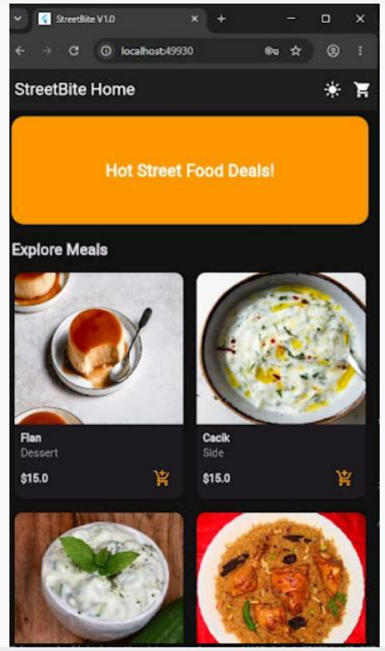

Dynamic meal discovery grid fetched from live API with responsive light and dark theme toggles.

Home Screen: Live food grid & offers banner.

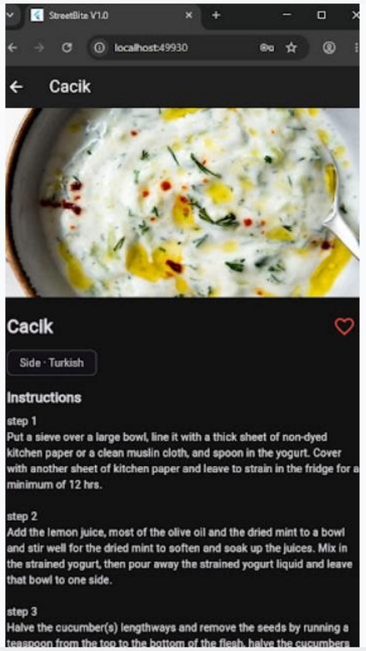

Explore Menu: Categorized meal items.

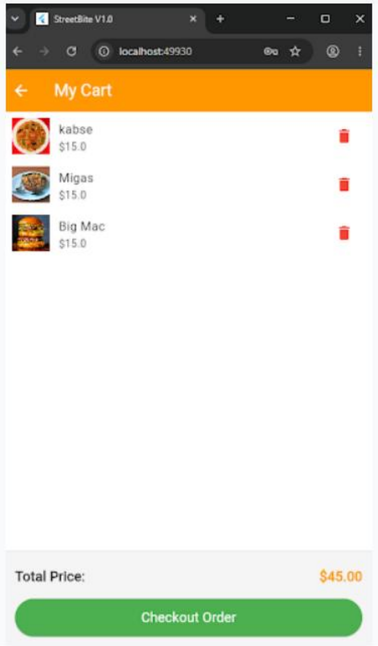

Dark Theme: Comfortable low-light interface.

Feature Showcase: Details, Cart & Checkout

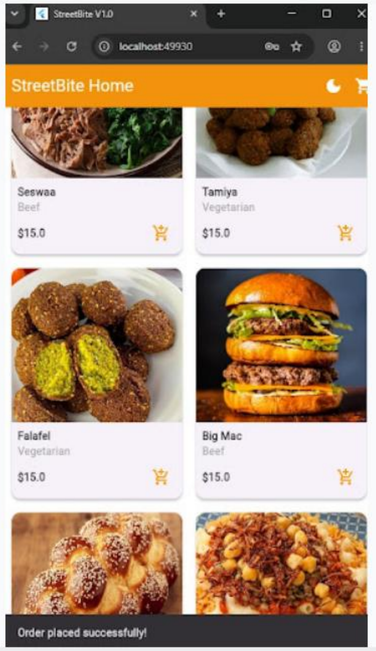

Comprehensive recipe instructions, instant cart management, and reactive order success feedback.

Meal Details: Ingredients, origin & instructions.

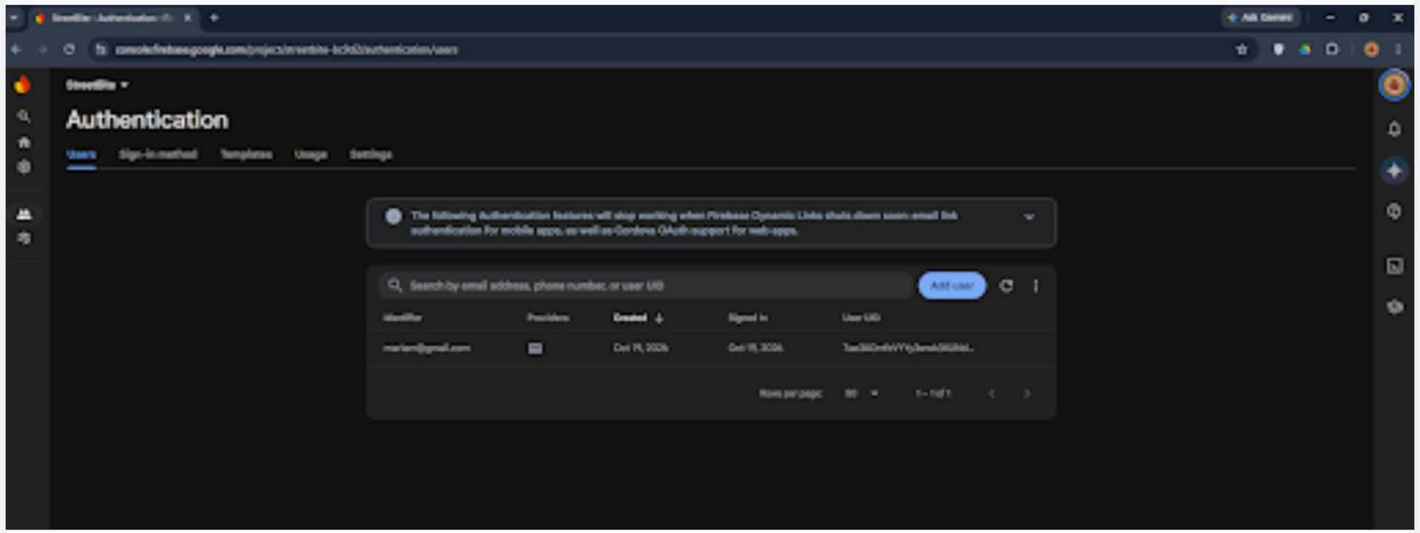

Cart & Checkout: Total calculation & order placement.

Order Feedback: Instant SnackBar confirmation.

Backend Cloud Persistence & Testing Evidence

Verified user authentication records stored securely in Firebase console for production readiness.

Firebase Authentication Console: Active registered user accounts (mariam@gmail.com).

Project Directory Tree & Architecture Structure

Strict Clean Architecture layout organized by features, data sources, domains, and presentation blocs.
